Foreword (by Debasis Mitra, Vice President, Bell Labs, Lucent Technologies)

Preface

Part-I: Introductory Network Design

PartI-1

1 Overview

Ch1-1

1.1	A Network Analogy	Ch1-2
1.2	Communication and Computer Networks, and Network Providers	Ch1-5
1.3	Notion of Traffic and Traffic Demand	Ch1-8
1.3.1	Traffic in the Internet	Ch1-8
1.3.2	Traffic in the Telephone Network	Ch1-12
1.3.3	Demand in Transport Network	Ch1-15
1.3.4	Distinction between Traffic and Transport Network	Ch1-16
1.3.5	Generic Naming for Demand and Capacity Volume	Ch1-16
1.4	A Simple Design Example	Ch1-17
1.5	Notion of Routing and Flows	Ch1-18
1.6	Architecture of Networks: Multi-Layer Networks	Ch1-19
1.7	Network Management Cycle	Ch1-21
1.8	Scope of the Book	Ch1-24
1.9	Naming and Numbering Convention	Ch1-27
1.10	Summary	Ch1-28

2 Network Design Problems – Notation and Illustrations

Ch2-1

2.1	A Network Flow Example in Link-Path Formulation	Ch2-2
2.2	Node-Link Formulation	Ch2-6
2.3	Notions and Notations	Ch2-9
2.4	Dimensioning Problems	Ch2-12
2.5	Shortest-Path Routing	Ch2-21
2.6	Fair Networks	Ch2-23
2.7	Topological Design	Ch2-25
2.8	Restoration Design	Ch2-26
2.9	*Multi-Layer Networks Modeling	Ch2-28
2.10	Summary	Ch2-34

3	Technology-Related Modeling Examples	Ch3-1
3.1	IP Networks: Intra-Domain Traffic Engineering	Ch3-2
3.2	MPLS Networks: Tunneling Optimization	Ch3-5
3.3	ATM Networks: Virtual Path Design	Ch3-6
3.4	Digital Circuit-Switched Telephone Networks: Single Busy-Hour and Multi-Busy Hour Network Dimensioning	Ch3-8
3.5	SONET/SDH Transport Networks: Capacity and Protection Design	Ch3-11
3.6	SONET/SDH Rings: Ring Bandwidth Design	Ch3-14
3.7	WDM Networks: Restoration Design with Optical Cross-Connects	Ch3-16
3.8	IP Over SONET: Combined Two-Layer Design	Ch3-17
3.9	Summary and Further Reading	Ch3-19
Part-II: Design Modeling and Methods		PartII-1
4	Network Design Problem Modeling	Ch4-1
4.1	Basic Uncapacitated and Capacitated Design Problems	Ch4-2
4.1.1	Uncapacitated Problems	Ch4-2
4.1.2	Capacitated Problems	Ch4-7
4.1.3	Mixed Problems	Ch4-10
4.2	Routing Restrictions	Ch4-11
4.2.1	Path Diversity	Ch4-11
4.2.2	Lower Bounds on Non-Zero Flows	Ch4-12
4.2.3	Limited Demand Split	Ch4-13
4.2.4	Integral Flows	Ch4-17
4.3	Non-linear Link Dimensioning, Cost and Delay Functions	Ch4-18
4.3.1	Modular Links	Ch4-18
4.3.2	Convex Cost and Delay Functions	Ch4-22
4.3.3	Concave Link Dimensioning Functions	Ch4-28
4.4	Budget Constraint	Ch4-33
4.5	Incremental NDPs	Ch4-33
4.6	Extensions of Problem Modeling	Ch4-35
4.6.1	Representing Nodes	Ch4-35
4.6.2	Capabilities of Link-Path Representation	Ch4-36
4.7	Summary and Further Reading	Ch4-37
5	General Optimization Methods for Network Design	Ch5-1
5.1	Linear Programming	Ch5-2
5.1.1	Basic Facts About LP	Ch5-2
5.1.2	Duality in LP	Ch5-4
5.1.3	Simplex Method	Ch5-7
5.1.4	Interior Point Methods (IPM)	Ch5-9
5.2	Mixed-Integer Programming	Ch5-11
5.2.1	The Branch-and-Bound (BB) Method	Ch5-12
5.2.2	The Branch-and-Cut (BC) Method	Ch5-14
5.2.3	The Cutting-Plane Method	Ch5-16

5.2.4	Dynamic Programming	Ch5-16
5.3	Stochastic Heuristic Methods	Ch5-17
5.3.1	Local Search	Ch5-18
5.3.2	Simulated Annealing (SAN)	Ch5-18
5.3.3	Evolutionary Algorithm (EA)	Ch5-20
5.3.4	Simulated Allocation (SAL)	Ch5-21
5.3.5	Tabu Search (TS)	Ch5-24
5.3.6	Other Methods	Ch5-25
5.4	LP Decomposition Methods	Ch5-25
5.4.1	Lagrangian Relaxation(LR)	Ch5-25
5.4.2	*Column Generation Technique for Candidate Path List Augmentation (CPLA)	Ch5-31
5.4.3	*Benders' Decomposition	Ch5-37
5.5	Gradient Minimization and Other Approaches for Convex Programming Problems	Ch5-39
5.5.1	The Flow Deviation (FD) Method	Ch5-40
5.5.2	The Gradient Projection (GP) Method	Ch5-41
5.5.3	*Dual Methods	Ch5-43
5.6	Special Heuristics for Concave Programming Problems	Ch5-44
5.6.1	Minimum First Derivative Length Path (MFDLP) Method	Ch5-45
5.6.2	Greedy Descent (GD) Method	Ch5-46
5.6.3	Numerical Example	Ch5-47
5.7	Solving Multi-Commodity Flow Problems	Ch5-48
5.7.1	LP Formulations	Ch5-48
5.7.2	Non-Bifurcated Flows	Ch5-48
5.7.3	Modular Links	Ch5-49
5.8	Summary and Further Reading	Ch5-50
6	Location and Topological Design	Ch6-1
6.1	Node Location Problem	Ch6-2
6.2	Joint Node Location and Link Connectivity Problem	Ch6-6
6.2.1	Design Formulation: One Level	Ch6-7
6.2.2	Design Formulation: Two-Level	Ch6-11
6.2.3	Design Results	Ch6-14
6.3	Topological Design	Ch6-18
6.3.1	Discussion	Ch6-18
6.3.2	Design with Budget Constraint	Ch6-19
6.3.3	Design with Extended Objective	Ch6-20
6.3.4	Transit Nodes and Links Localization Problem	Ch6-22
6.3.5	Heuristic Algorithms	Ch6-25
6.3.6	Numerical Results	Ch6-28
6.4	Lower Bounds for Branch-and-Bound	Ch6-29
6.4.1	Case: Topological Design with Budget Constraints	Ch6-30
6.4.2	Case: Transit Node and Link Localization Problem	Ch6-31
6.5	Summary and Further Reading	Ch6-34
7	Networks With Shortest-Path Routing	Ch7-1

7.1	Shortest-Path Routing Allocation Problem	Ch7-3
7.1.1	Basic Problem Formulation	Ch7-4
7.1.2	Adjustments of the Basic Problem	Ch7-7
7.1.3	Minimum-Hop Routing versus Network Delay: An Illustration	Ch7-10
7.2	MIP Formulation of the Shortest-Path Routing allocation Problem and Dual Problems . .	Ch7-12
7.2.1	MIP Formulation of the shortest-path routing Allocation Problem	Ch7-12
7.2.2	Duality and Shortest-Path Routing	Ch7-14
7.3	Heuristic Direct Methods for Determining the Link Metric System	Ch7-16
7.3.1	Weight Adjustment (WA)	Ch7-17
7.3.2	Simulated Annealing (SAN)	Ch7-18
7.3.3	Lagrangian Relaxation (LR)-based Dual Approach	Ch7-18
7.4	Two-Phase Solution Approach	Ch7-20
7.4.1	Formulation of the Two-phase Optimization Problem	Ch7-21
7.4.2	Solving Phase 1	Ch7-22
7.4.3	Solving Phase 2	Ch7-26
7.5	Impact due to Stochastic Approaches	Ch7-27
7.6	Impact of Different Link Weight System	Ch7-29
7.7	Impact on Different Performance Measures	Ch7-31
7.8	Uncapacitated Shortest-Path Routing Problem	Ch7-32
7.9	Optimization of the Link Metric System under Transient Failures	Ch7-34
7.10	*NP-Completeness of the Shortest-Path Routing Allocation Problem	Ch7-36
7.11	*Selfish Routing and its Relation to Optimal Routing	Ch7-38
7.12	Summary and Further Reading	Ch7-43
8	Fair Networks	Ch8-1
8.1	Notions of Fairness	Ch8-2
8.1.1	An Example	Ch8-2
8.1.2	Max-Min Fairness (MMF) Allocation Problem for Fixed Paths	Ch8-3
8.1.3	Proportional Fairness (PF) Allocation Problem for Fixed Paths	Ch8-7
8.2	Design Problems for Max-Min Fairness (MMF)	Ch8-9
8.2.1	Capacitated Problems for Flexible Paths	Ch8-9
8.2.2	Uncapacitated Problems for Flexible Paths	Ch8-20
8.2.3	Capacitated Problems With Non-Bifurcated Flows	Ch8-22
8.3	Design Problems for Proportional Fairness (PF)	Ch8-22
8.3.1	Capacitated Problems for Flexible Paths	Ch8-22
8.3.2	Uncapacitated Problems With a Budget Constraint	Ch8-23
8.3.3	Uncapacitated Problems With an Extended Objective Function	Ch8-29
8.3.4	Numerical Examples	Ch8-30
8.3.5	Minimum Delay	Ch8-35
8.3.6	Non-Bifurcated Flows	Ch8-35
8.4	Summary and Further Reading	Ch8-36
Part-III: Advanced Models		PartIII-1
9	Restoration and Protection Design of Resilient Networks	Ch9-1

9.1	Failure States, Protection/Restoration Mechanisms and Diversity	Ch9-2
9.1.1	Characterization of Failure States	Ch9-2
9.1.2	Re-establishment Mechanisms	Ch9-3
9.1.3	Protection by Diversity	Ch9-5
9.2	Link Capacity Protection/Restoration	Ch9-7
9.2.1	Link Restoration	Ch9-8
9.2.2	Hot-Standby Link Protection	Ch9-11
9.3	Demand Flow Re-Establishment	Ch9-12
9.3.1	Unrestricted Reconfiguration	Ch9-12
9.3.2	Restricted Reconfiguration	Ch9-15
9.3.3	*Path Restoration With Situation-Dependent Back-up Paths	Ch9-18
9.3.4	*Path Restoration With Single Back-up Paths	Ch9-19
9.3.5	Hot-Standby Path Protection	Ch9-21
9.4	Extensions	Ch9-22
9.4.1	Non-Linear Cost/Dimensioning Functions	Ch9-22
9.4.2	Modular Link Capacities and/or Integral Flows	Ch9-23
9.4.3	Budget Constraint	Ch9-24
9.4.4	*Routing Restrictions	Ch9-25
9.4.5	Separating Normal and Protection Capacity	Ch9-29
9.4.6	Separated Nominal and Protection Design	Ch9-30
9.5	Protection Problems	Ch9-31
9.5.1	Link Capacity Restoration	Ch9-31
9.5.2	*Path Restoration	Ch9-33
9.6	Applications	Ch9-36
9.6.1	Dynamic Routing Circuit-Switched Networks	Ch9-36
9.6.2	Backbone IP, MPLS, and ATM Networks	Ch9-37
9.6.3	Optical Systems, SONET/SDH and WDM Networks	Ch9-38
9.7	Summary and Further Reading	Ch9-39
10	Application of Optimization Techniques for Protection and Restoration Design	Ch10-1
10.1	Path Generation	Ch10-2
10.1.1	Unrestricted Reconfiguration	Ch10-2
10.1.2	Restricted Reconfiguration	Ch10-5
10.1.3	Backup Path Restoration	Ch10-8
10.1.4	Numerical Results	Ch10-9
10.2	Lagrangian Relaxation (LR) With Subgradient Maximization	Ch10-12
10.2.1	Unrestricted Reconfiguration	Ch10-13
10.2.2	Restricted Reconfiguration	Ch10-16
10.2.3	Backup Path Restoration	Ch10-17
10.3	Benders' Decomposition	Ch10-18
10.3.1	Unrestricted Reconfiguration	Ch10-18
10.3.2	Restricted Reconfiguration	Ch10-24
10.3.3	Numerical Results	Ch10-26
10.4	Modular Links	Ch10-28
10.5	Stochastic Heuristic Methods	Ch10-31

10.5.1	Simulated Allocation (SAL)	Ch10-31
10.5.2	Simulated Annealing (SAN)	Ch10-37
10.5.3	Evolutionary Algorithm (EA)	Ch10-37
10.6	Selected Application: Wavelength Assignment Problem in WDM Networks	Ch10-38
10.6.1	Design Problems	Ch10-38
10.6.2	Design Methods	Ch10-41
10.6.3	Numerical Results	Ch10-42
10.6.4	Remarks	Ch10-42
10.7	Summary and Further Reading	Ch10-43
11	Multi-Hour and Multi-Time-Period Network Modeling and Design	Ch11-1
11.1	Multi-Hour Design	Ch11-2
11.1.1	Illustration of Multi-Hour Dimensioning	Ch11-2
11.1.2	Multi-Hour Dimensioning Models	Ch11-4
11.1.3	Multiple Services Case	Ch11-8
11.1.4	Algorithmic Approaches	Ch11-10
11.1.5	Computational Results	Ch11-11
11.1.6	Capacitated Case: Multi-Hour Routing	Ch11-15
11.2	Multi-Period Design	Ch11-17
11.2.1	Capacity Planning	Ch11-17
11.2.2	Multi-Period Flow Routing Problem	Ch11-22
11.2.3	Model Extensions	Ch11-25
11.2.4	Algorithmic Approaches	Ch11-27
11.2.5	Dynamic Programming	Ch11-27
11.2.6	A Hybrid Method	Ch11-28
11.3	Summary and Further Reading	Ch11-31
12	Multi-Layer Networks: Modeling and Design	Ch12-1
12.1	Design of Multi-Layer Networks	Ch12-3
12.1.1	Multi-Layer Technology-Related Example	Ch12-3
12.1.2	Network Dimensioning Involving Two Resource Layers	Ch12-6
12.1.3	Allocation Problems with Two Layers of Resources	Ch12-11
12.1.4	Extensions to More than Two Layers	Ch12-14
12.1.5	Optimization Methods for Multi-Layer Normal Design Problems	Ch12-17
12.2	Modeling of Multi-Layer Networks for Restoration Design	Ch12-18
12.2.1	The Case of Two Reconfigurable Layers	Ch12-19
12.2.2	Restoration Involving Only Reconfiguration of Lower Layer	Ch12-23
12.2.3	Restoration Involving Only Reconfiguration of Upper Layer	Ch12-24
12.2.4	Extensions	Ch12-25
12.2.5	Optimization Methods for Multi-Layer Restoration Design	Ch12-26
12.3	Multi-Layer Design With Multi-Hour Traffic	Ch12-27
12.3.1	Mixed Two-Resource Layer Design With Multi-Hour Traffic	Ch12-27
12.3.2	Multi-Layer Design Problems With Multi-Hour, Multi-Service Traffic	Ch12-31
12.3.3	Multi-Layer Design through Layer Separation	Ch12-34
12.3.4	Failure Propagation	Ch12-35

12.4	Application of Decomposition Methods for Two-Layer Design	Ch12-36
12.4.1	LR With Subgradient Maximization of the Dual Function	Ch12-37
12.4.2	Benders' Decomposition	Ch12-41
12.4.3	Path generation	Ch12-47
12.5	Numerical Results	Ch12-51
12.6	Cost Comparison	Ch12-56
12.6.1	Diversity and Restoration (with Multi-Hour Traffic)	Ch12-56
12.6.2	Gain With Dynamic Transport Over Static Transport (With Multi-Service, Multi-Hour Traffic)	Ch12-60
12.7	Grooming/Multiplex Bundling	Ch12-61
12.7.1	Illustration of Multi-Layer in the Presence of Grooming	Ch12-62
12.7.2	Special Cases when Grooming Nodes are known	Ch12-63
12.7.3	A General Two Layer Formulation	Ch12-65
12.7.4	Remark	Ch12-68
12.8	Summary and Further Reading	Ch12-68
13	Restoration Design of Single and Multi-Layer Fair Networks	Ch13-1
13.1	Restoration Design of Single-Layer PF networks	Ch13-2
13.1.1	Problem Formulation and Iterative Solution	Ch13-2
13.1.2	Algorithm With Dual Non-blocking Tests	Ch13-3
13.1.3	*Regular Sets of Blocking Situations	Ch13-6
13.1.4	Numerical Results	Ch13-10
13.2	Decomposition Methods for the Single-Layer Restoration Problems	Ch13-16
13.2.1	Benders' Decomposition	Ch13-16
13.2.2	Path Generation	Ch13-17
13.3	Design of Resilient Two-Layer PF Networks	Ch13-18
13.3.1	Three Basic Problems for Unrestricted Flow Restoration	Ch13-18
13.3.2	Numerical Examples	Ch13-21
13.3.3	Decomposition Methods for Two-layer Networks	Ch13-27
13.4	Extensions	Ch13-27
13.5	Summary and Further Reading	Ch-28
A	Optimization Theory Refresher	ChA-1
A.1	Basic notions	ChA-1
A.2	Karush-Kuhn-Tucker (KKT) optimality conditions	ChA-2
A.3	Interpretation of the Lagrange Multipliers in the KKT Conditions	ChA-4
A.4	Numerical Methods for Finding Minima of Differentiable Problems	ChA-4
A.5	Duality	ChA-5
A.6	Duality for Convex Programs	ChA-6
A.7	Duality for Convex Objective and Linear Constraints	ChA-7
A.8	Subgradient Maximization of the Dual Function	ChA-8
A.9	Subgradient Maximization of the Dual Function of Linear Programming Problems	ChA-9
B	Introduction to Complexity Theory and NP-Completeness	ChB-1
B.1	Introduction	ChB-1

B.2	Complexity of a Problem	ChB-2
B.3	Deterministic and Non-Deterministic Machines	ChB-3
B.4	The Classes of Problems Known as \mathcal{P} and \mathcal{NP}	ChB-5
B.5	Reducibility Relation Between Problems	ChB-5
B.6	The Class of \mathcal{NP} -Complete Problems	ChB-6
B.7	The Satisfiability Problem and Cook's Theorem	ChB-7
B.8	Network Flow Problems	ChB-7
	B.8.1 The D2CIF problem	ChB-8
	B.8.2 The U2CIF problem	ChB-10
B.9	Final Remarks	ChB-11
C	Shortest-Path Algorithms	ChC-1
C.1	Introduction and Basic Notions	ChC-1
C.2	Basic Shortest-Path Problem	ChC-2
	C.2.1 Dijkstra's Algorithm for Non-Negative Weights	ChC-3
	C.2.2 Shortest Paths With a Hop Limit	ChC-4
	C.2.3 Negative Weights	ChC-4
C.3	K Shortest Paths and all Optimal Paths	ChC-5
	C.3.1 K Shortest Paths	ChC-6
	C.3.2 All Optimal Paths	ChC-8
C.4	Shortest Sets of Disjoint Paths	ChC-8
	C.4.1 Shortest Sets of Edge-Disjoint Paths	ChC-9
	C.4.2 Shortest Sets of Vertex-Disjoint Paths	ChC-10
D	Using LP/MIP Package	ChD-1
D.1	Solving Linear Programming Problems using Maple, Matlab, and CPLEX	ChD-1
D.2	Solving (Mixed) Integer Programming Problems Using CPLEX	ChD-4
D.3	Modeling Using AMPL	ChD-6
	List of Acronyms	ChD-9
	Solutions to Selected Exercises	ChD-11
	Bibliography	Biblio-1
